

NATURAL STONE  
 COUNTERTOP DISCLAIMER

**Natural Stone Countertop Disclaimer**

Natural stone countertops, Granite, Limestone, Marble, Quartzite and any quarried materials are products of nature. With natural products there are some qualities of the material, fabrication and installation that must be understood by the homeowner including:

- All natural stone colours are species of natural materials and as a result colouration, veining and texture – i.e. pits, fissures and fragmentation, will vary from samples and are an inherent part of the finished product.
- Natural stone thickness may vary from slab to slab, even within the same species of stone. For example, 3cm product is a nominal 30mm thick, + / - 7mm and 2cm product is a nominal 20mm thick, + / - 4mm.
- Natural stone countertops will usually require seams. Slab size will have no relationship to seam placement. The location and number of seams is a function of manufacturing and installation. Seam placement is at the sole discretion of Adanac Granite Inc.
- Adanac Granite Inc. will not be responsible for cracking or breakage that occurs after installation due to application of excessive heavy weight or force on the unsupported spans of the countertop surface such as sink and cook-top fronts and eating bar extensions as examples. Standing on a countertop surface is considered excessive weight.
- All natural stone countertops are sealed after fabrication in order to help reduce the natural porosity of the stone. All natural stone countertops will also be susceptible to staining. Adanac Granite Inc. will not be responsible for any stains that may occur.

Understanding the above characteristics of natural stone counter surfaces will help you enjoy the unique qualities and beauty that can only be experienced with natural stone.
