

# YOUR INSTALLATION CHECKLIST

## Your Installation Checklist

To ensure your granite project goes smoothly we require the following prior to installation:

- A 50 per cent deposit.
- Our selection/approval sheet must be signed off outlining stone, edge detail, sinks and any other special instructions.
- For the template we will need the counters cleared off if you are renovating. New construction requires all of the kitchen installation to be complete, including all end gables.
- At the time of installing the template, we need the sink if it's being under mounted. Please note, the sink template alone will not suffice.
- We will require the range/cook top specification if you have purchased a new appliance. The cook top will have to be on site at the time of installation. If using existing appliances, we can take measurements from them.
- All taps, faucets, etc. are required on site the day of installation.
- All existing counter tops are to be removed by the homeowner prior to installation, unless otherwise indicated in your contract.
- If your project is a renovation, all plumbing and related electrical will have to be disconnected prior to us arriving for the installation.
- If your project is a renovation, please empty out your sink cabinets.
- We are able to work while other trades are on your project: however, please note we will be working in the entire kitchen area for the day, please ensure there is no lacquer being sprayed while we are working on the project.
- You must wait 24 hours for your plumber to re-connect the sink. The adhesive must cure to insure a proper bond.
- When we have completed the installation, we will inspect and cover the new granite tops. Please make sure other trades after us do not use them as a work surface.

If you have any other questions, please do not hesitate to call our office at 403.203.9323.

Thank you for assisting us to ensure we can do the best job possible with your installation.
